Good day,

I am writing to express my strong interest in the position at your organization. As a Computer Engineering graduate, I am eager to leverage my foundations in relational database design, automated ETL pipelines, and data verification to contribute to your team's analytics and data-driven workflows.

During my recent six-month tenure as an IT Operations & QA Intern, I spearheaded the technical migration of company tracking logs from legacy Excel frameworks into a centralized system. This hands-on role sharpened my skills in data cleaning, sanitization, and structured validation. I managed, logged, and audited IT data assets while managing automated backup synchronization pipelines across OneDrive and Google Cloud environments. Furthermore, I utilized scripting to automate data routines and conducted meticulous system QA for an asset infrastructure managing over 5,000 records, ensuring absolute structural integrity.

My deep understanding of data engineering principles is anchored in my academic thesis, where our team built a comprehensive relational database infrastructure integrated with a live software system. I designed an end-to-end ETL (Extract, Transform, Load) pipeline to ingest complex biometric telemetry streams from a 4-in-1 vital sign kiosk. This system extracted and calculated real-time parameters such as heart rate, respiratory data, oxygen saturation, temperature, blood pressure, and BMI tracking. To support seamless clinic operations, I structured schemas to handle relational database transformations for personal identifiers, credentials, and access levels across distinct user profiles, including university students, employees, administrators, nurses, and doctors.

To validate my technical expertise, I have earned industry credentials spanning rigorous coursework, career tracks, and formal assessment certifications. Through DataCamp, I completed the comprehensive Associate Data Engineer in SQL and Associate Data Analyst in SQL career tracks, along with their professional training courses, and validated this expertise by passing the assessments to become a certified DataCamp Associate Data Engineer and Associate Data Analyst. Complementing these are my credentials in Data Fundamentals (IBM & TESDA) and Python Essentials (Cisco). I am highly motivated to bring this balance of data pipeline engineering, analytics, and strict validation testing to a high-ownership data environment. I am available to begin immediately and welcome the opportunity to discuss how my background can support your operational goals.

Thank you for your time and consideration.

Best regards,

Khin Andrei Roque Gamboa
